

# Design Applicatif de NovaDrop

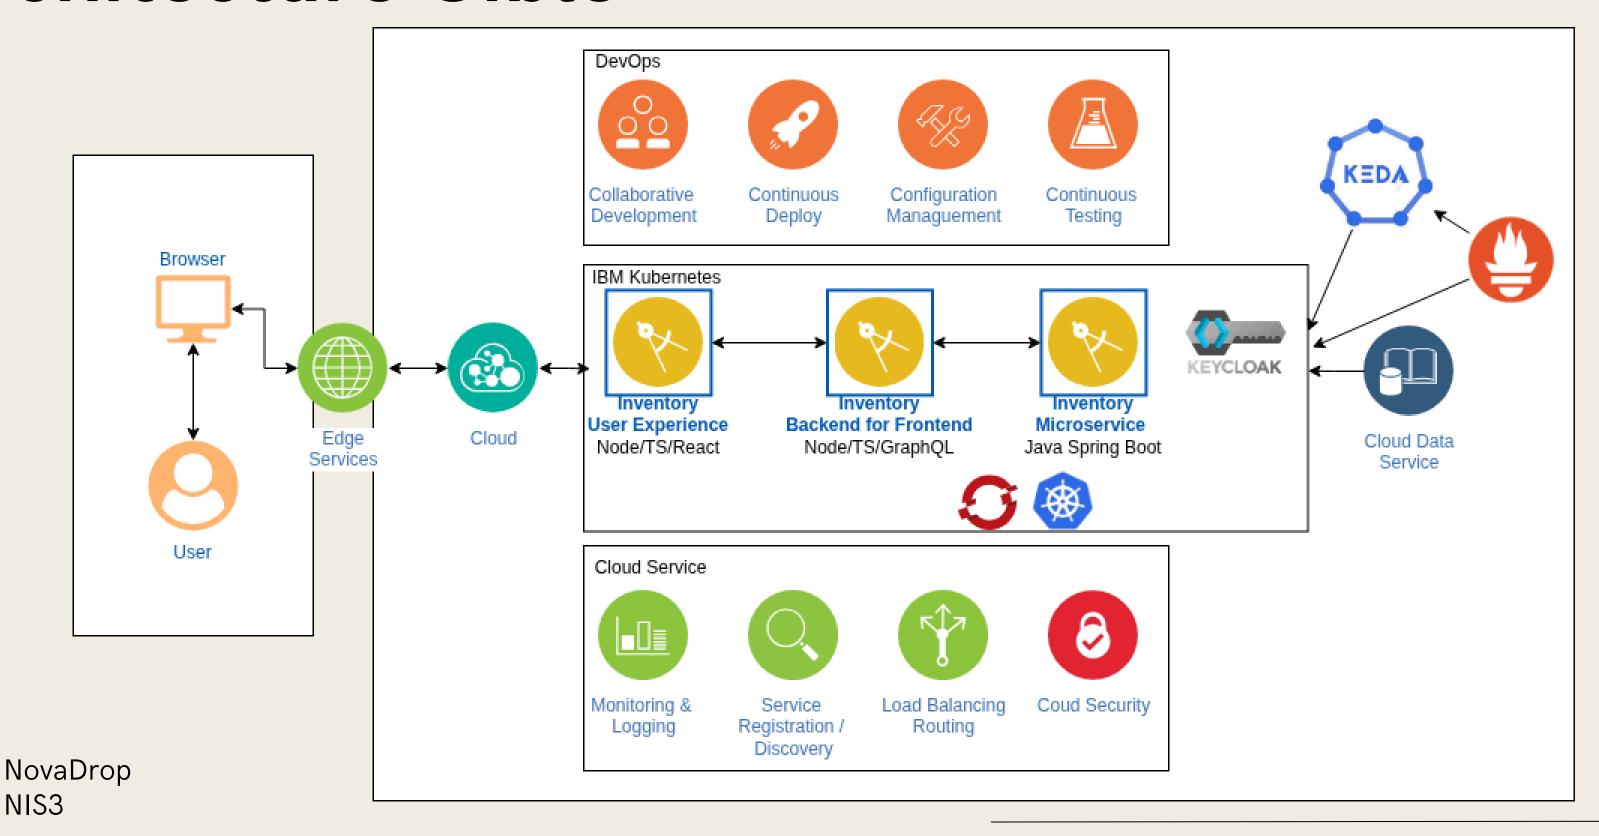

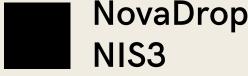

#### Nos objectifs

- Rendre l'application plus sécurisée grâce à la Gestion d'accès
- Limiter l'effondrement du serveur lors d'une trop forte demande grâce à l'**Autoscaling**

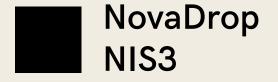

#### **Architecture Cible**

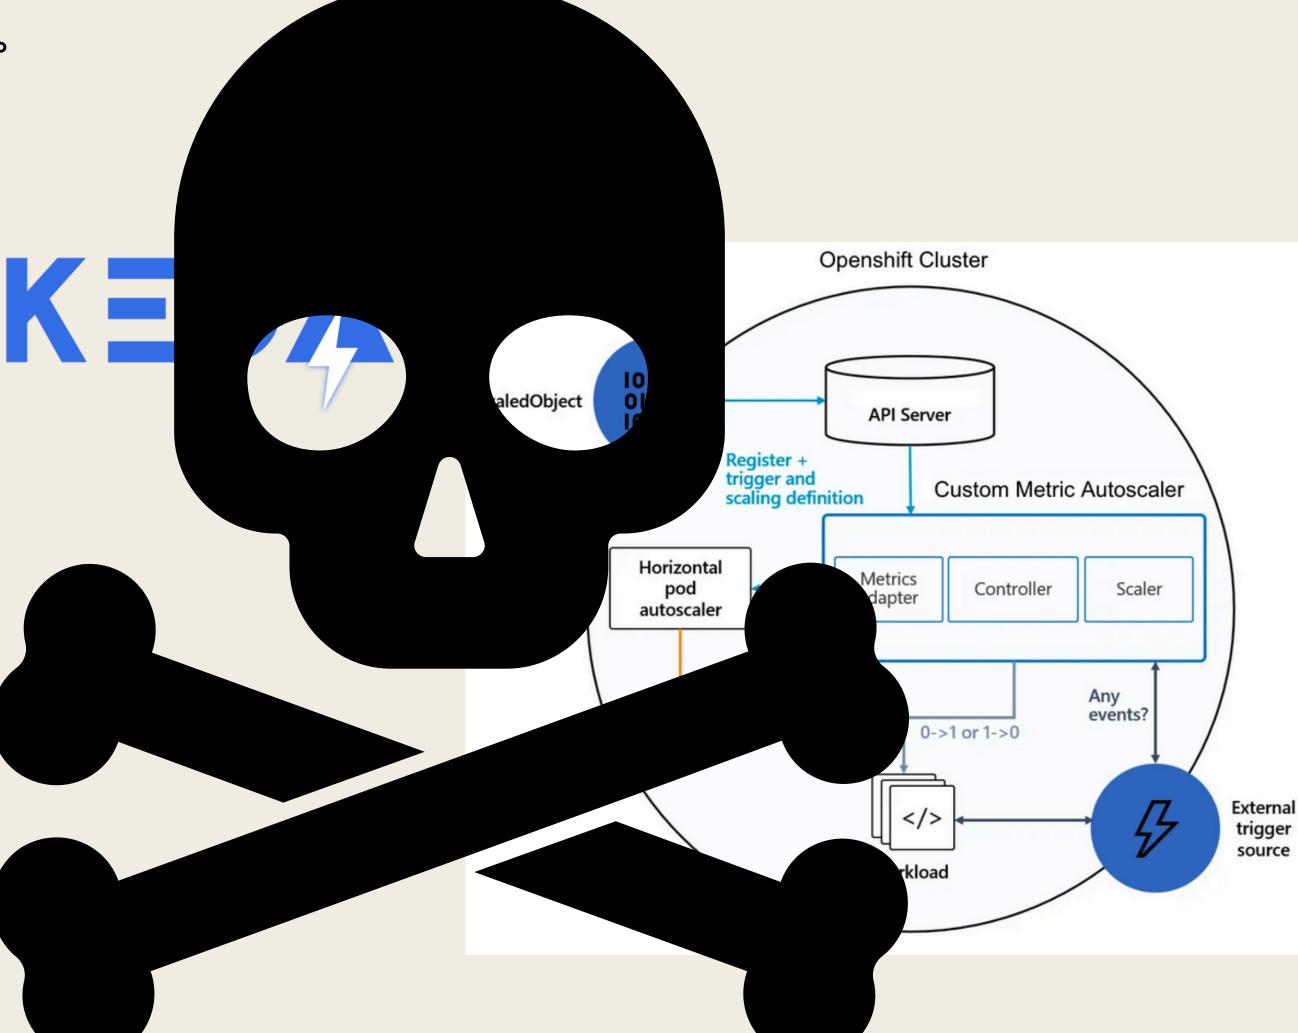

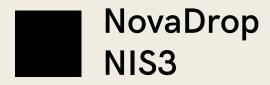

# Keycloak

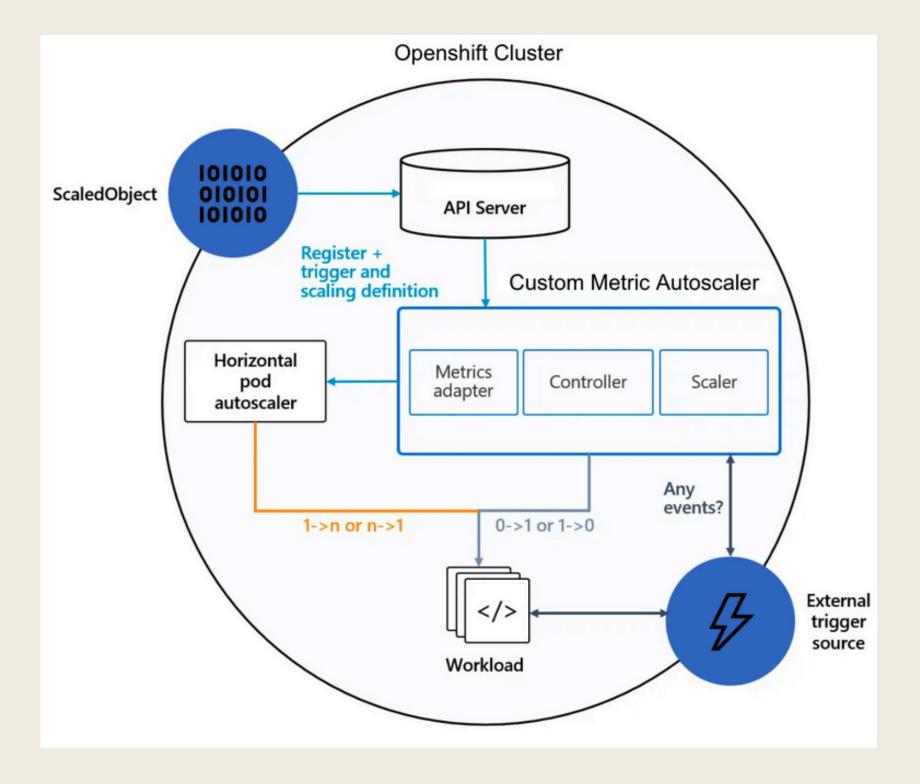

# Keda

### Pour aller plus loin

- Recoder l'application afin de la rendre plus performante
- Ajouter une PostgresQl pour gérer les inventories
- Implémenter Ferriskey à la place de Keycloak

# Merci!

Sarah THEOULLE Nathael BONNAL Isalyne LLINARES--RAMES
